3-INSTALLATION

There are two methods to install the theme.

a : Installing from Wordpress

b : Installing Via FTP Server

If the normal installation method (a) is not supported by your web host, you will have to use the alternate option (b).

Installing from WordPress

Follow the steps below to install inside WordPress:

Login to WordPress Admin and browse to **Plugins > Add New** and click **Upload Plugin** and in new page Click on **Chosen File** Browse your computer to select "ithemeland-woocommerce-bulk-product-editing.zip" (it's in the zip file you downloaded from Codecanyon). Click **"Install Now"** button.

Wait while the plugin is uploaded and installed.

Once it's uploaded, click the **Activate Plugin** link.

Installing via FTP Server

Follow the steps below to install via FTP:

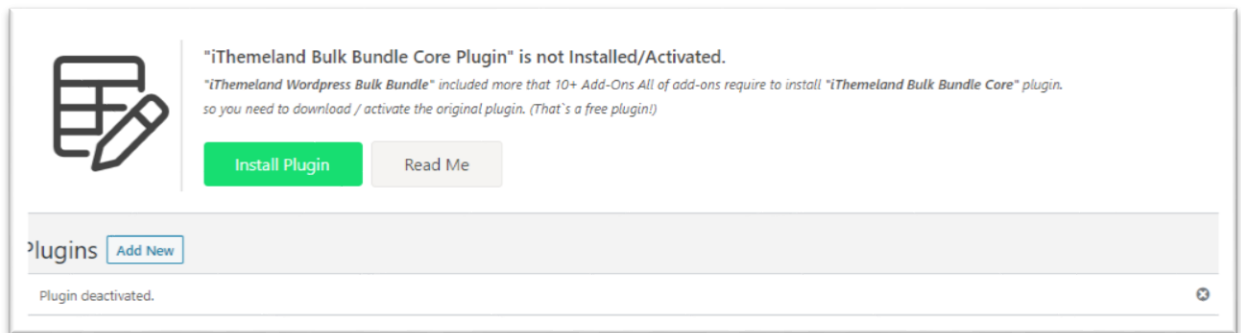

Log into your hosting space via an FTP software.

Unzip the "ithemeland-woocommerce-bulk-product-editing.zip" file and ONLY use the extracted plugin folder.

Upload the extracted plugin folder into wp-content/plugins folder.

Activate the newly installed plugin. Go to Plugins > Installed Plugins and find "**iThemeland WooCommerce Bulk Product Editing**" plugin and active it.

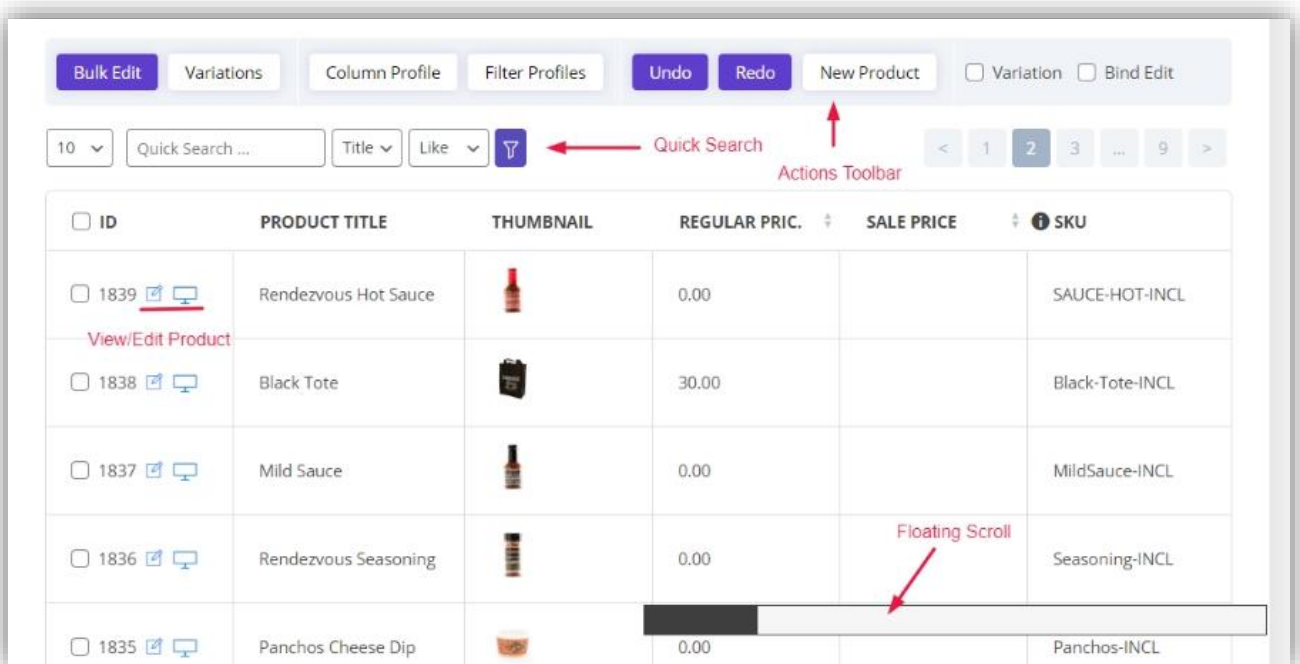

Note: You should install “**iThemeland bulk bundle core**” as requirement plugin.

4-How to Use?

After Install and Activate this plugin a menu will be added in your admin menu named “Pro Bulk Bundle WooCommerce Bulk” and click “Woo Products”

5-Product Editing:

This plugin included several sections.

- Filtering
- Bulk Editing
- Column Manager
- Add Meta Fields
- History
- Import/Export
- Settings
- Toolbar
- Product Table

• Filtering:

There is a search form included all woocommerce products fields that divided in 7 separate tabs base on fields type with specific operand (Behavior).

It is possible to filter products of your shop and see result in table.

The screenshot displays the 'Filtering' section of the iThemelandCo WooCommerce Bulk Product Editing interface. It features a tabbed navigation system with seven tabs: 'General', 'Categories/Tags/Taxonomies', 'Pricing', 'Shipping', 'Stock', 'Type', and 'Custom Fields'. The 'General' tab is currently selected. Below the tabs, there are eight filterable fields: 'Product ID(s)', 'Product Title', 'Product Content', 'Product Excerpt', 'Product Slug', 'Product SKU', 'Product URL', and 'Product Date'. Each field has a dropdown menu for the operand (e.g., 'Exact', 'Like') and a text input for the value. The 'Product ID(s)' field includes a placeholder example: 'for example: 1,2,3 or 1-10 or 1,2,3|10-20'. The 'Product Date' field has two separate input boxes for 'Product Date From ...' and 'Product Date To ...'. A checkbox labeled 'Only Parent Products' is located to the right of the 'Product ID(s)' field. At the bottom of the form, there are three buttons: 'Get products' (purple), 'Reset Filters' (white), and 'Filter Name ...' (white). A 'Save Profile' button (purple) is also present. A 'Filter Form' button with a dropdown arrow is located at the bottom center.

1- **General:** Popular woocommerce products fields. Such as ID, Title, Sku, ...

Most of these fields are as Text type beside of behavior drop-down.

Like: will be found products where textinput value is exact or like a part of the text(title for example).

Exact: will be found products where textinput value is exact as in the text(title for example).

Not: will be found products where textinput value is not presented.

Begin: will be found products where textinput value is on the text(title for example) begin.

End: will be found products where textinput value is on the text(title for example) end.

Note: For searching by products ID always uses 'EXACT' only. Also for searching for some products by ID you can use comma for example: 23,586,777. Also it is possible use ranges like: 29-32 - will be found products from ID 29 to ID 32. You can search in only parent products too.

- 2- **Categories/Tags/Taxonomies:** In this tab you can search products with specific Category/Tag/Taxonomy. This plugin fetches all of Custom Taxonomy and Attribute automatically. For example, if you have Brand plugin, you can search products which is (NOT) in selected brands.

Behavior Drop-Downs:

OR: will be found all products which has one of the selected terms.

AND: will be found all products which has all selected terms.

NOT IN: will be found all products which has no one of the selected terms.

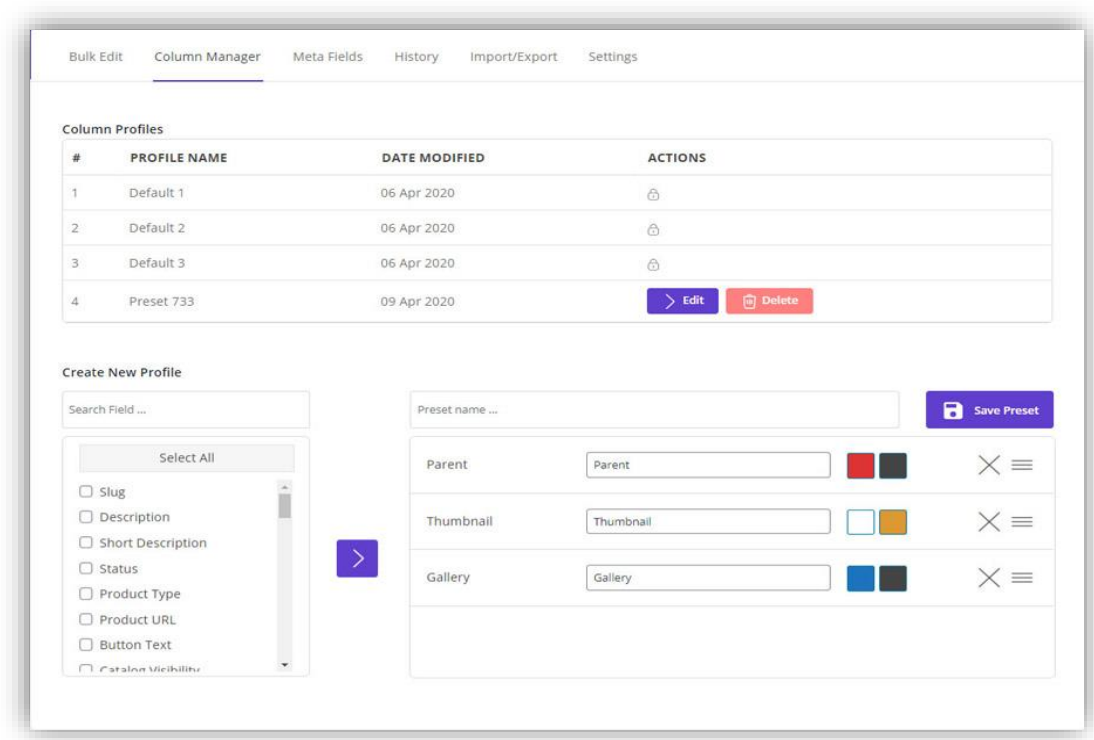

- 3- **Pricing:** In this tab you can search products based on price fields such as: Sale-Price, Sale-Price and ...
- 4- **Shipping:** In this tab you can search products based on shipping fields such as: Width, Height and ...
- 5- **Stock:** In this tab you can search products based on Stock fields such as: Manage Stock, Stock Quantity and ...
- 6- **Type:** In this tab you can search products based on extra fields such as: Product Type, Product Status, Featured and ...
- 7- **Custom Fields:** If you add Meta Fields in "Meta Fields" sections will be appeared in this tab and you can search over them.

Note: There is an option to save your search form as profile and use it for next times.

• Column Manager

Mange columns of table. You can Create yours customize presets and use them in column profile section.

There are some default presets that you cannot Edit/Delete theme.

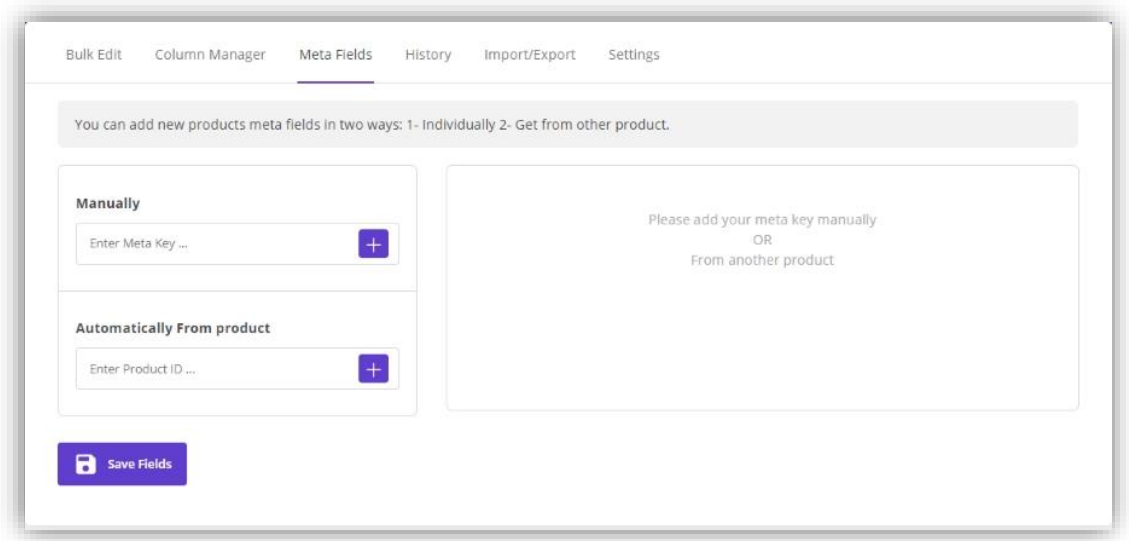

Although you can add new profile too, for that you should follow below steps:

- 1- Set your profile' s title.
- 2- Select columns in left side add move them to right side.
- 3- You can set label and Background Color and Text Color
- 4- You can move column to order them too.

When you save presets, you can Edit/Delete them too. Your presets will be appeared in column profile (will be explained in future).

• Meta Fields

In this tab you can attach all products meta fields related to the products in 2 ways:

- 1- Manually: add keys by hands, do it when you know meta key
- 2- Automatically from product: convenient way get all meta keys and leave all you need. Just drop in the textinput the product ID which has already filled up all meta data you need and press 'Plus' button or Enter on your keyboard.

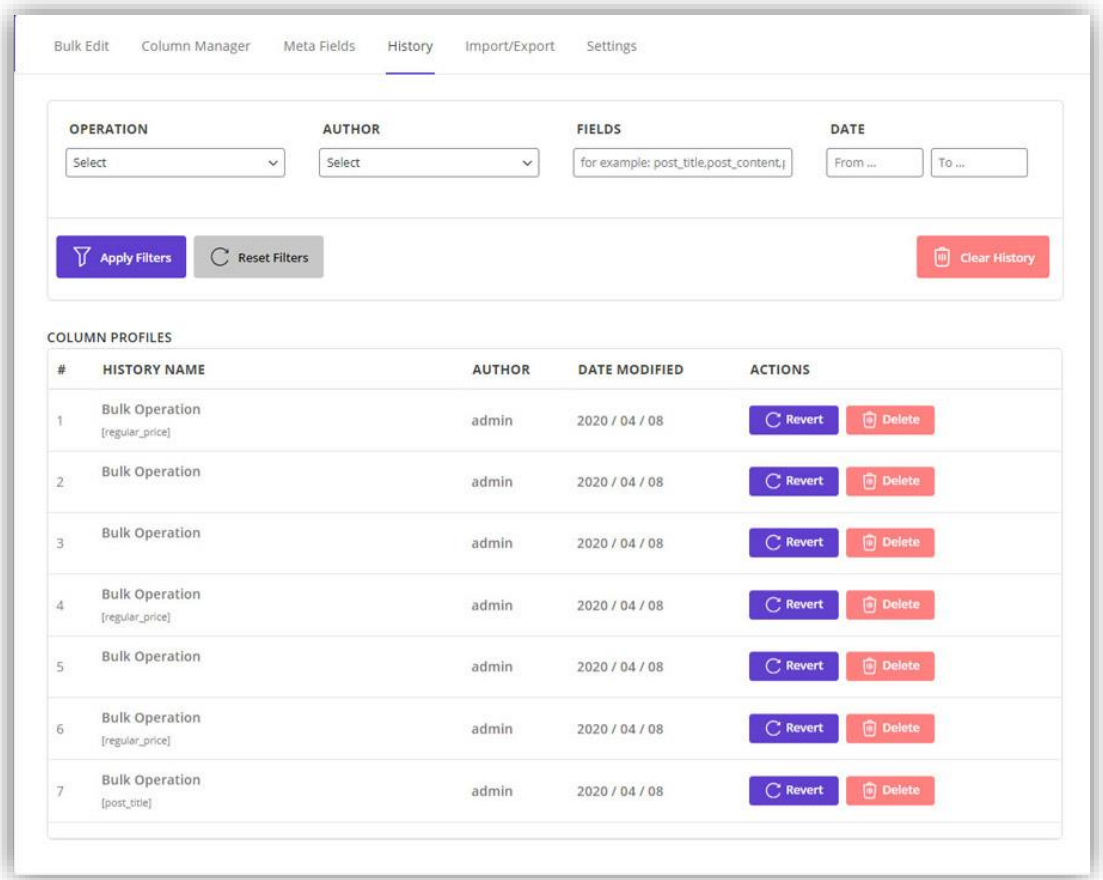

After adding meta key in the system select which type data keeps there and how to display it in the Product Editor. For decimals select type 'number' and string for all another types. If data is logic and can be 1 or 0 - select view type as checkbox.

Do not forget to rename meta fields title, because usually it has long title (equal to key string) and without changing this title its column in the Products Editor will be to wide.

After adding meta keys, renaming and selecting its view type click on 'Save fields' button. The new fields will be added to Search Form in Custom fields tab, Bulk Edit in Custom Fields tab, Column Manager and Column Profile.

• History

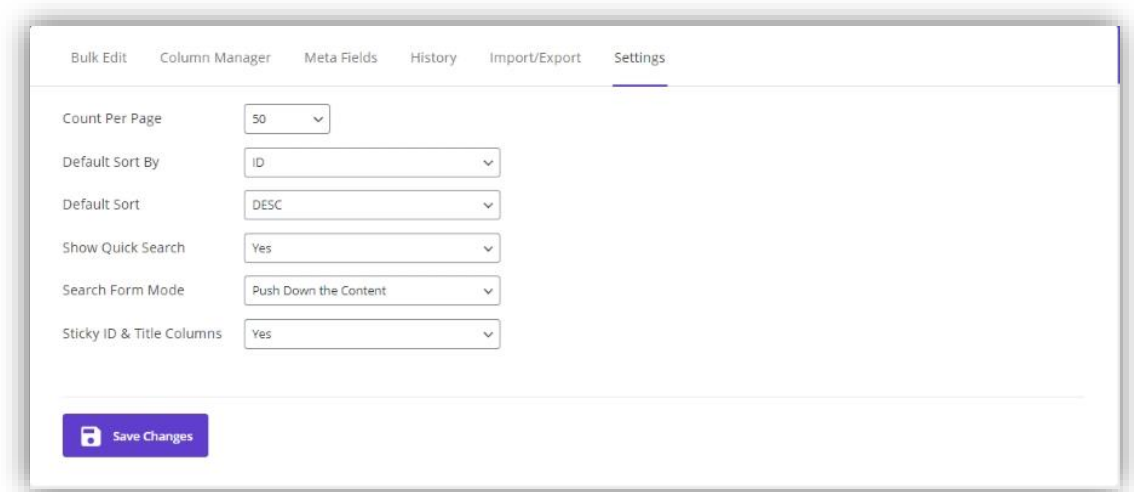

List of your changes and possible to roll back to the previous data. Sometimes mistakes happens, and it is not appropriate for the shop data. To roll back to the previous data will help tab History, where it is possible to roll back nearly all the products data as for one product so for bulk operations.

Some buttons in this tab you interested in:

- **Clear the History:** remove the history for the current logged-in user. Do it before starting of your work day to avoid big heap of history data where you can get lost.
- **Revert:** button which displays on each history operation. Clicking this button revert data to the product field ID and title of which you can see on the left side
- **Delete:** remove a history item forever

• Settings

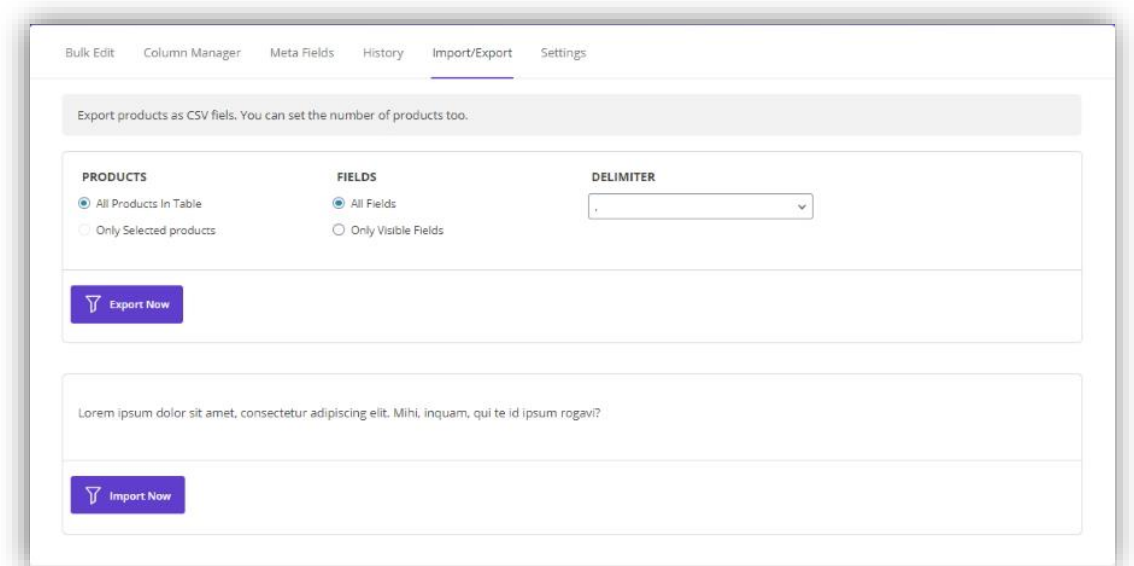

The screenshot shows the 'Settings' tab of the iThemelandCo Bulk Product Editing interface. It contains several configuration options, each with a dropdown menu or a text input field. At the bottom, there is a purple 'Save Changes' button.

Setting	Value
Count Per Page	50
Default Sort By	ID
Default Sort	DESC
Show Quick Search	Yes
Search Form Mode	Push Down the Content
Sticky ID & Title Columns	Yes

There are some settings:

- **Count per Page:** Number of rows in each page of table
- **Default Sort By:** Sort data Base on which one of fields?
- **Default Sort:** Ascending/Descending?
- **Show Quick Search:** Show/Hide quick search in top of table.
- **Search Form Mode:** Push down the content after search form be opened or Don' t push the content.
- **Sticky ID & Title Columns:** Fixed ID & Title columns after scroll too.

• Import/Export

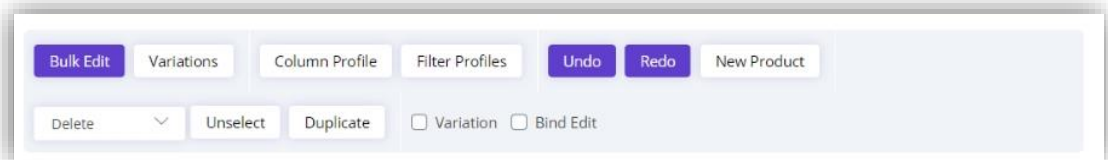

The screenshot shows the 'Import/Export' tab of the iThemelandCo Bulk Product Editing interface. It features two main sections: 'EXPORT' and 'IMPORT'. The 'EXPORT' section has a header 'Export products as CSV files. You can set the number of products too.' and contains three sub-sections: 'PRODUCTS' (with radio buttons for 'All Products In Table' and 'Only Selected products'), 'FIELDS' (with radio buttons for 'All Fields' and 'Only Visible Fields'), and 'DELIMITER' (a dropdown menu). Below these is a purple 'Export Now' button. The 'IMPORT' section contains a text area with placeholder text 'Lorem ipsum dolor sit amet, consectetur adipiscing elit. Mihi, inquam, qui te id ipsum rogavi?' and a purple 'Import Now' button.

In this tab you can Import products through Import button or Export products. There are some options for Exports.

- All Products in Table: Export all of products that's appeared in table.
- Only Selected Products: Export selected products in table.
- All Fields: Export products with all woocommerce products fields.
- Only Visible Fields: Export products just with visible column in table.

• Toolbar Actions

• Bulk Editing:

Now you need to edit data in your shop. You can do that in 3 ways. Do bulk edit on:

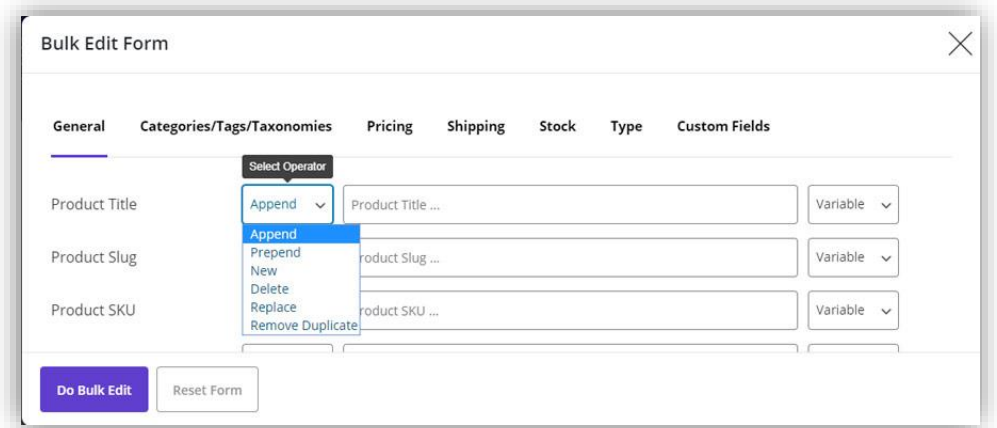

- All Products
- Filtered Products
- Selected Products (Checked by checkbox)

A screenshot of the 'Bulk Edit Form' window. It has a title bar with a close button (X). Below the title bar are tabs: 'General' (selected), 'Categories/Tags/Taxonomies', 'Pricing', 'Shipping', 'Stock', 'Type', and 'Custom Fields'. The 'General' tab is active, showing a list of product fields: 'Product Title', 'Product Slug', 'Product SKU', 'Description', and 'Short Description'. Each field has an 'Append' dropdown menu, a text input field with a placeholder (e.g., 'Product Title ...'), and a 'Variable' dropdown menu. At the bottom are two buttons: 'Do Bulk Edit' (purple) and 'Reset Form' (light blue).

Here is more information about Bulk Edit Form, Tab 'Bulk Edit' divided

on 7 parts:

- 1- **General:** Popular woocommerce products fields. Such as ID, Title, Sku, ...

Behavior Drop-Down:

Append: value will be attached to the end of the existed value

Prepend: value will be attached to the beginning of the existed value

New: existed value will be removed and replaced by new value

Replace: value will replace text in the existed text

Delete: Remove entered value in the existing value and remove it

Remove Duplicate: Delete all the items containing duplicate values in the column, we only leave one item per unique value.

Some time you need to change data with existed field value of the current product. In this case you can use Variable Drop-Down. It is included some of popular product fields.

For example, you want to change title and use {ID} in title, you can use {ID} variable. We can apply bulk editing to such fields using: prod-{ID} - so if the product ID is 23 in meta field will be value as prod-23.

{Title}: Title of the current product

{ID}: ID of the current product

{SKU}: SKU of the current product

{Menu Order}: Menu Order of the current product

{Parent Id}: Parent ID of the current 'product variation' (actual for variations only)

{Parent Title}: Parent Title of the current 'product variation' (actual for variations only)

{Parent SKU}: Parent SKU of the current 'product variation' (actual for variations only)

{Regular Price}: Regular price of the current product

{Sale Price}: Sale price of the current product

- 2- **Categories/Tags/Taxonomies:** There are some assigned items for Category and Custom Taxonomy for each product or you need to assign new Category or Taxonomy to products. In this case you can select terms and apply to products.

Behavior Drop-Down:

Append: Enter the term(s) to append to the existing term(s).

Replace: Replace some term(s) with new term(s).

Delete: Remove selected term(s) in the existing term(s).

- 3- Pricing: In this tab you can change all of pricing fields of products such as: Sale-Price, Sale-Price and ...

There are specifics behavior for pricing fields:

Set New: New value will replace existed value

Clear Value: Set Null.

Formula: You can set formula. The current value is X. For example: (X+10) mean, current value + 10 .

Increase by Value: Increase the existing value by a number.

Decrease by Value: Decrease the existing value by a number.

Increase by %: Increase the existing value by a percentage.

Decrease by %: Decrease the existing value by a percentage.

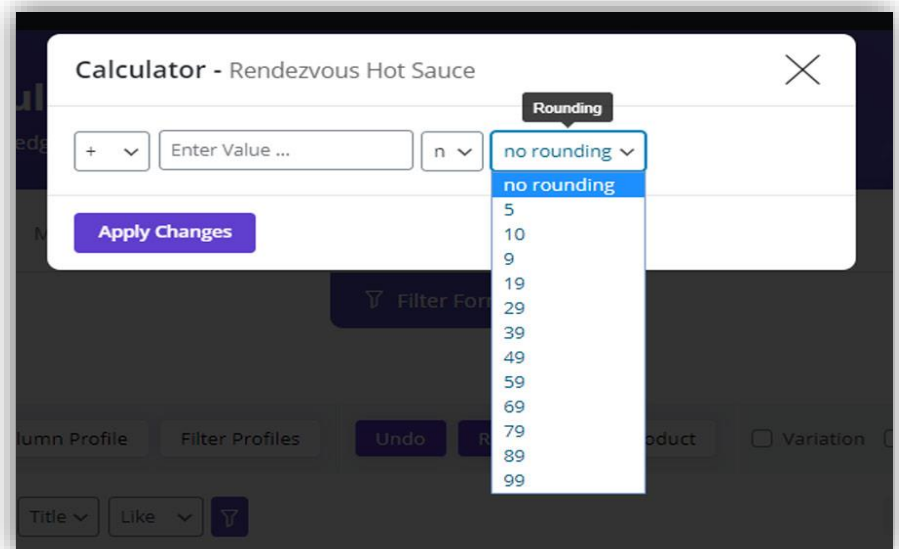

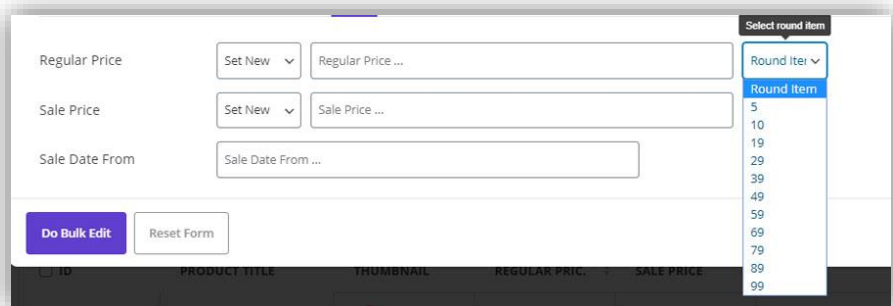

Increase by Value (From Sale): for regular price field only. Give ability to set new field value as: sale_price plus entered value

Increase by % (From Sale): for regular price field only. Give ability to set new field value as: sale_price plus (sale_price multiply entered value)/100

Decrease by Value (From Regular): for sale price field only. Give ability to set new field value as: regular_price minus entered value

Decrease by % (From Regular): for sale price field only. Give ability to set new field value as: regular_price minus (regular_price multiply entered value)/100

Note: Information about rounding behavior:

- **no rounding:** rounding will not be applied
- **5:** prices will be rounded to numbers like: 23.75, 44.45, 11.15
- **10:** prices will be rounded in numbers like: 23.70, 44.40, 11.10
- **9 ... 99:** will round prices in numbers like: 23.09, 44.49, 11.99

- 4- Shopping: Shipping fields are as numeric fields, therefore their behavior are same as previous section.
- 5- Stock: In this tab you can set stock fields for products.
- 6- Type: In this tab you can change products based on extra fields such as: Product Type, Product Status, Featured and ...
- 7- Custom Fields: If you add Meta Fields in “Meta Fields” sections will be appeared in this tab and you can change them in selected products.

• Variations

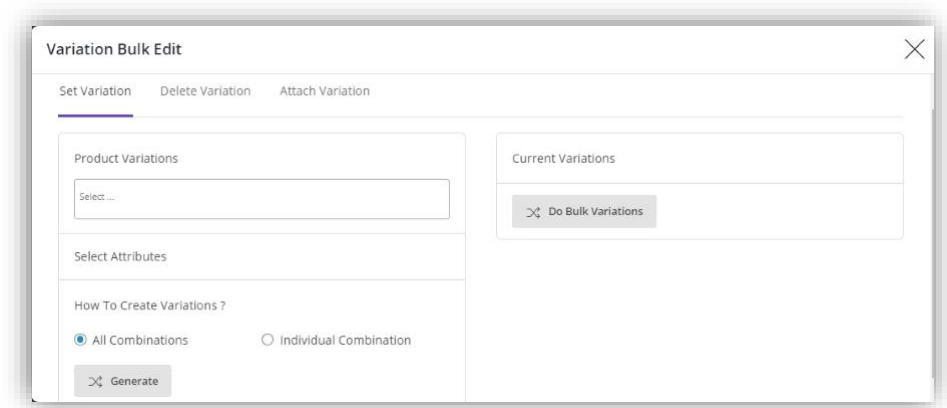

In woocommerce you can add Variations for Variable Product. You can do it with this plugin easily.

Here you can do:

- **Set Variation:** In this tab you can set new variation for products
- **Delete Variation:** In this tab you can delete the exist variations
- **Attach Variation:** In this tab you can attach a new attribute to combinations.

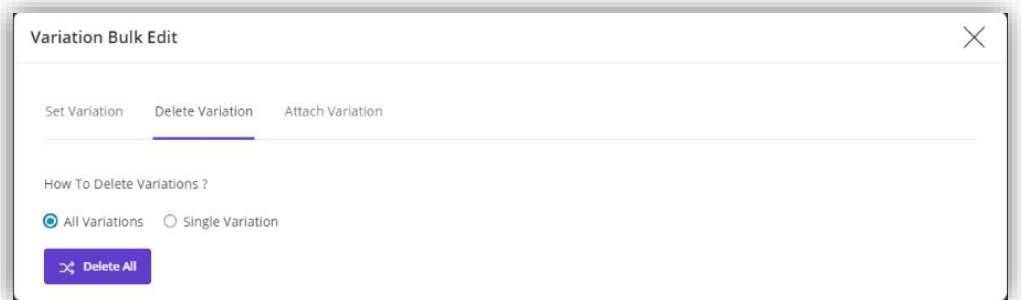

How does it work?

- **Set Variation:**

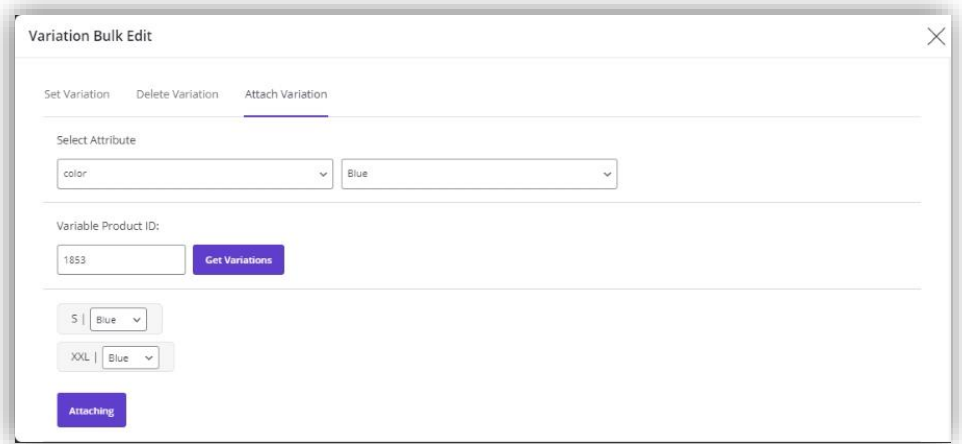

- you should select your product(s) and change the Product Type to “Variable” and then open Variations Popup.
- open Variations Popup.

- Select your attributes
- Select items for each attribute
- Add your variations, there are 2 ways:
 - Individually: In this mode you should add combinations one by one.
 - All Combinations: In this mode all of combination will be generated automatically
- Manage your combination in right side
- Do Bulk Variations
- **Delete Variation:**

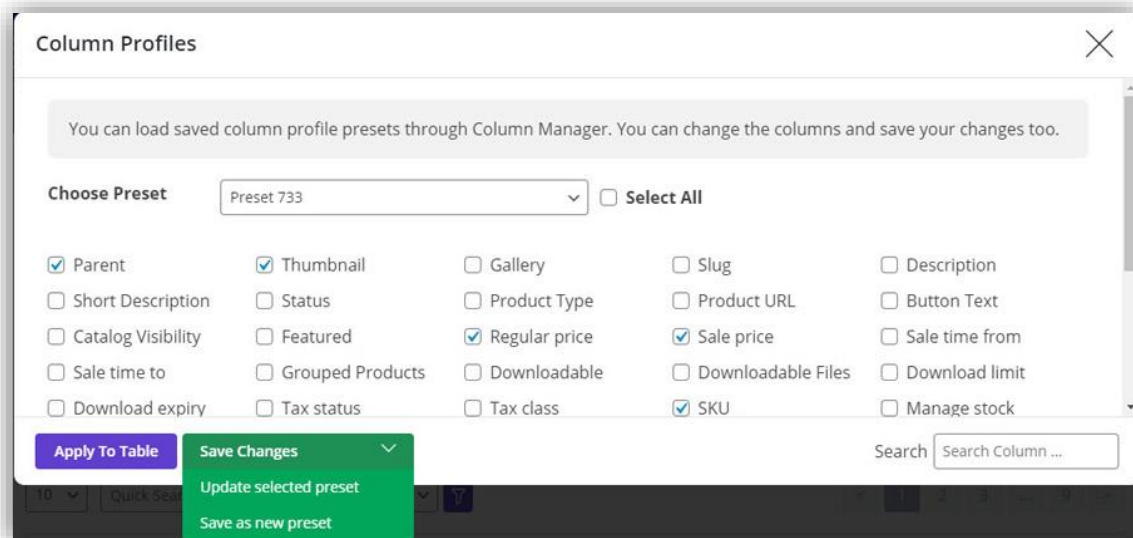

- Select your Products
- Delete variations in 2 ways:
 - **All Variations:** Delete all variations of selected products
 - **Single Variations:** Select your variations and delete them. If you selected multiple product, you should select your attributes and then select your item that you want to delete all of variations that included that term.
- **Attach Variation:**

This feature is useful when you created new attributes for the existed products and you want to attach that new attributes. So for example we had only color and size and now created new product attribute - material. Now we have to attach it to our existed attributes.

- Select Products
- The current variation will be appeared if exist
- Select your attribute which should be attached
- Select default term
- You can get all variations of exist Variable Products and use if for current product, set ID and Get Variations
- Select your term for each one of combination
- Click “Attaching” button

- Column Profile

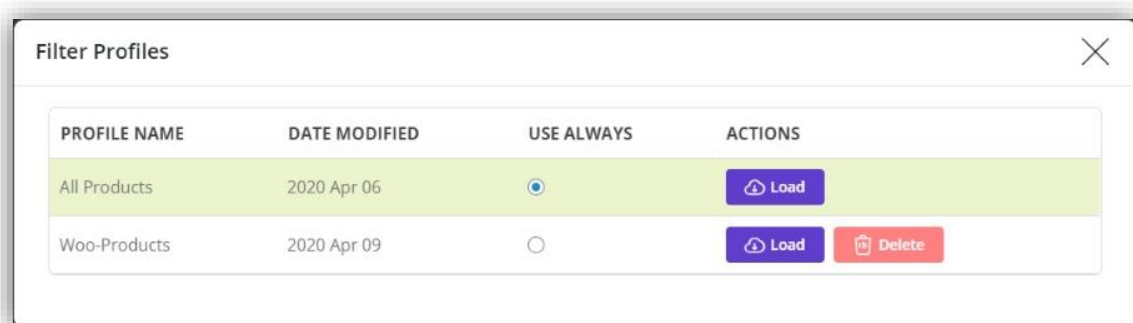

Sometime you need to change the column order, show/hide some of columns. You can switch between saved profiles.

There are 3 default profiles for that beside of your profiles that you can make by Column Manager section.

Note: If you change the checkbox, you can save it as new preset or save over selected profile (Not for default profiles).

[IMAGE]

• Filter Profile

There was an option is search form that you can save your search query and use it for next time. Here you can load previously saved filters profile.

You can load your profile for this moment or set it for default query (Use Always), this mean after reloading page, your search will be applied automatically.

- **Undo/Redo**

Sometime you undo/redo your changes.

- **New Product**

You can Add New Product(s).

- **Duplicate**

Create clone products for selected products.

- **Delete**

Delete selected product in 2 ways: 1- Move to Trash 2- Delete permanently

- **Variation**

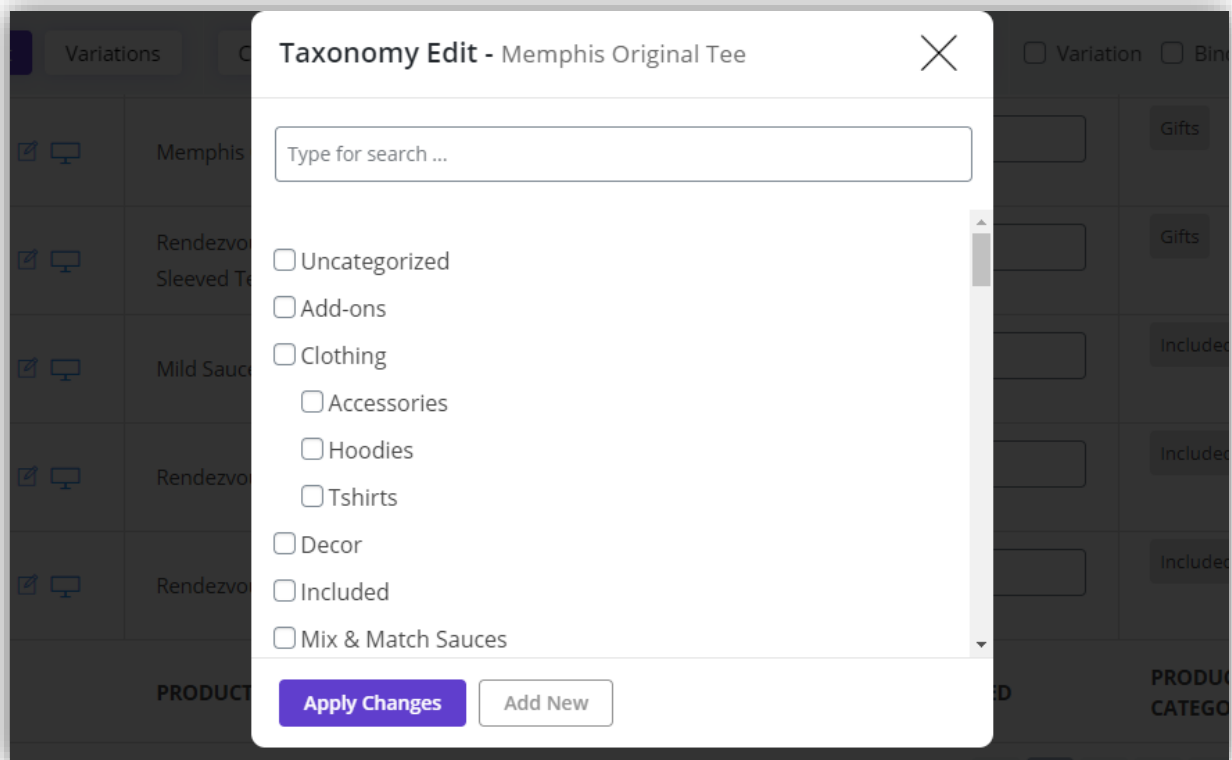

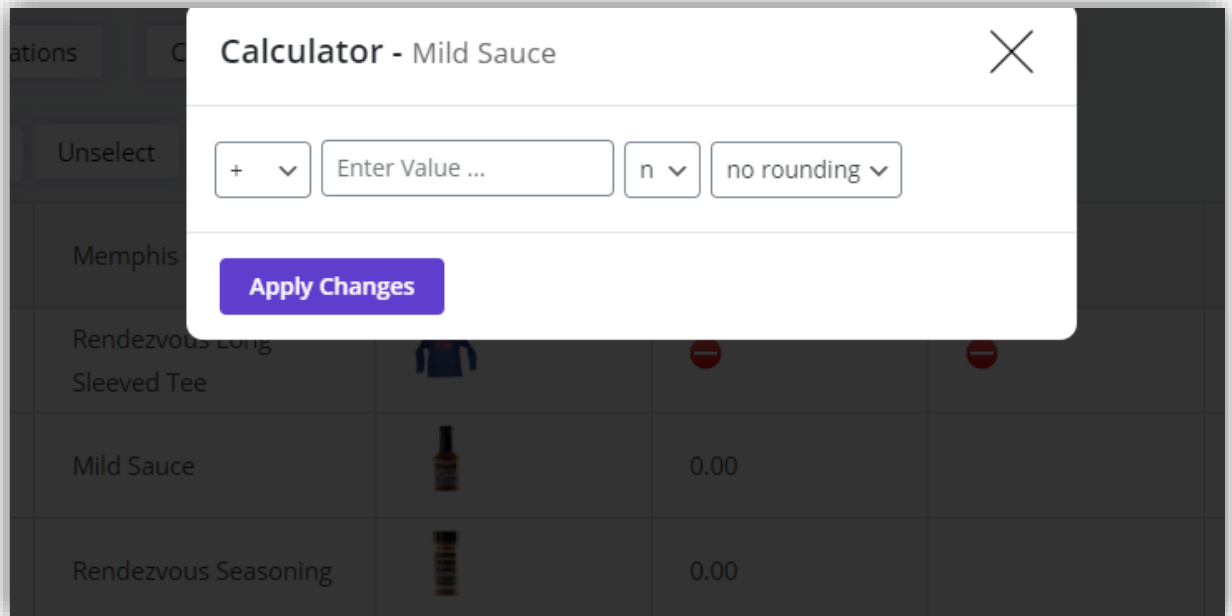

If checked, the variations will be appeared in separate rows, below the variable product' s row.

- **Bind Bulk**

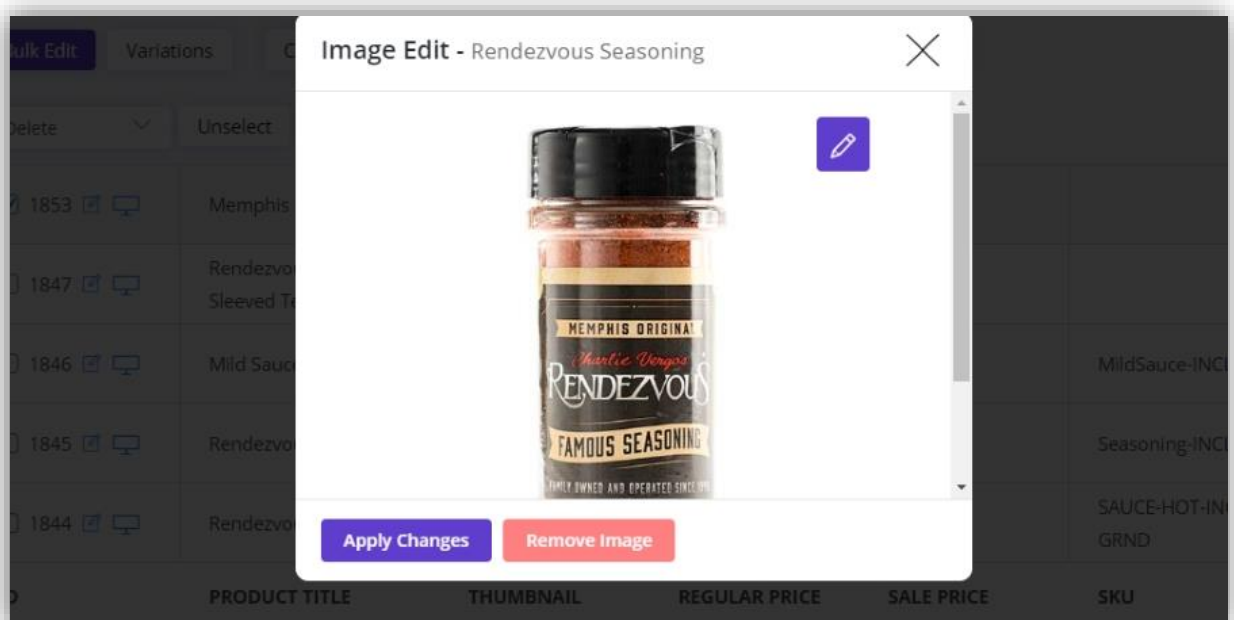

This option is usable in Edit Inline, if you enable this option, you can apply the current changes to all of selected products.

For example, you select 3 products and change the title, 3 selected products get the same titles.

- **Edit Inline**

<input type="checkbox"/> 1853  	Memphis Original Tee			2020/03/14	Gifts
<input type="checkbox"/> 1847  	Rendezvous Long Sleeved Tee				
<input type="checkbox"/> 1846  	Mild Sauce		MildSauce-INCL-GRND		
<input type="checkbox"/> 1845  	Rendezvous Seasoning		Seasoning-INCL-GRND		

In edit table you can click on each cells and edit the values based on their type. For example, Upload files for feature image and gallery, Calculator for numeric fields and ...

6-License:

You should set your purchase key and verification. After verification you can use plugin perfectly.
